

JANAM PATRIKA ONLINE

Project Blueprint, Business Framework and Claude Code Build Prompts

A mobile-first website where parents enter a newborn's birth details and receive a bilingual (Hindi + English) Vedic Janam Patrika PDF for Rs 51 / 101 / 251.

Instructions for Claude Code (read first): This file is the complete project brief. Place it in the project folder together with the reference file **Janam Patrika__Baby_Boy_Darak.pdf** (the 13-page sample). Read both fully. Then follow Part 3 (Master Prompt) and Part 4 (Phase Prompts). Work in phases, and do NOT start the next phase until the founder says "go ahead".

Contents

- **Part 1** - Business framework (for explaining to colleagues)
- **Part 2** - Reference data from the sample PDF (for tests and form fields)
- **Part 3** - Master Prompt for Claude Code
- **Part 4** - Phase prompts 1 to 7
- **Part 5** - Vibe-coding tips, licensing and risks
- **Part 6** - Pre-start checklist

Part 1: Business Framework

1. The idea in one line

A 5-minute, UPI-paid, Hindi-English Janam Patrika for newborns, priced at Rs 51-101, with upsells for rituals and consultations.

- India has roughly 23 million births a year. Each is a family event with Namkaran and a pandit visit.
- A pandit's kundali often costs Rs 500-2,000 and takes days. We deliver in minutes at a fraction of the cost.
- Strong emotional and cultural demand. No inventory. Very high gross margin.

2. Customer and problem

Who	Pain	Our answer
New parents (25-35)	Need Rashi, Nakshatra and name letter quickly	Instant free preview
Grandparents	Want a traditional, trustworthy document	Hindi + Sanskrit shlokas, Kuldevi, Gotra
NRIs	No access to a good pandit	Online delivery, English option

3. Product ladder (revenue)

Tier	Price	Contents	Purpose
Free Preview	Rs 0	Rashi, Nakshatra, Pada, name letters	Hook and trust
Mini	Rs 51	3-4 pages: Panchang, chart, name letters	Impulse purchase
Full Janam Patrika	Rs 101	13 pages like the sample	Main product
Premium	Rs 251	Full + 10 names with numerology + Sanskar calendar	Higher margin
Astrologer-Reviewed	Rs 501	Premium + human review + 15-min call	Trust and margin

Upsells: Gandmool Shanti puja booking, Namkaran muhurat (Rs 51), Kundali Milan (Rs 101), yearly forecast (Rs 99), printed hardbound copy (Rs 499+), Name Finder tool, WhatsApp consultation.

Prices must be editable from an admin config. Never hard-code them.

4. Data to collect (from the sample PDF)

- **Mandatory:** date of birth, time of birth, place, gender, child's name (or "Baby Boy/Girl of ..."), parents' names, WhatsApp number.
- **Optional:** Gotra, Kuldevi, report language, hospital name, email.
- **Auto-derived:** latitude, longitude, timezone, ayanamsa.
- **Time-accuracy flag:** ask "Is the birth time exact?" Lagna and divisional charts depend on it.

5. Technical architecture

User (mobile web)

- > Frontend (Next.js + Tailwind, Hindi + English)
- > Backend API (Python FastAPI)
 - | - Astro Engine (Swiss Ephemeris / pyswisseph, Lahiri)
 - | - Rule Engine (yogas, doshas, houses, dasha)
 - | - Numerology module (Chaldean, Lo Shu, Kua)
 - | - Content layer (JSON rule-book templates + optional LLM wording)
 - | - PDF Generator (HTML -> PDF with Devanagari fonts)
- > PostgreSQL (Supabase) + file storage (Cloudflare R2 / Supabase)

- > Payments (Razorpay: UPI, cards, wallets)
- > Delivery (download link, email; WhatsApp API later)
- > Admin dashboard + analytics

Layer	Choice	Reason
Frontend	Next.js + Tailwind	Fast, SEO-friendly, mobile-first
Backend	Python FastAPI	Best astrology libraries
Calculations	Swiss Ephemeris (pyswisseph)	Industry standard, accurate
Place lookup	Google Places API (or OpenStreetMap Nominatim to start)	Auto lat/long/timezone
PDF	WeasyPrint or Playwright	Good Devanagari support
Payments	Razorpay	UPI, easy integration, test mode
Messaging	WhatsApp Business API (Gupshup/Interakt), later	Parents live on WhatsApp
Hosting	Vercel + Render/Railway	Low initial cost
Database	PostgreSQL (Supabase)	Simple, scalable

Golden rule: All calculations are done by code, never by an LLM. LLMs hallucinate degrees and nakshatras. An LLM may only polish wording written from the vetted rule-book.

6. Calculation pipeline

1. Input: convert local time to UTC.
2. Compute Julian Day, then planet positions (sidereal, Lahiri).
3. Derive Lagna, whole-sign houses, Nakshatra and Pada, Tithi, Yoga, Karana.
4. Compute divisional charts (D-2, D-3, D-7, D-9, D-10, D-12).
5. Compute Vimshottari Mahadasha and Antardasha.
6. Rule engine detects yogas and doshas (Hamsa, Malavya, Gandmool, Manglik, Sade Sati, etc.).
7. Numerology: Mulank, Bhagyank, Kua, Lo Shu grid, personal years.
8. Name letters from Nakshatra Pada and Rashi; names filtered by numerology.
9. Merge into templates and render the PDF.
10. Automatic QA checks, then deliver.

7. User journey

1. Landing page with sample preview: "Get your baby's Janam Patrika, from Rs 51".
2. Fill the form (under 90 seconds).
3. Free preview: Rashi, Nakshatra, name letter.
4. Choose plan, pay by UPI.
5. PDF generated in 1-2 minutes.
6. Delivered by download link and email (WhatsApp later).
7. Follow-ups: Namkaran reminder, Gandmool date alert, Annaprashan reminder (repeat business).

8. Revenue and unit economics (illustrative, validate with a pilot)

Item	Per Rs 101 order
Revenue	Rs 101
Payment gateway (about 2% + GST; UPI often cheaper; verify current rates)	approx. Rs 2-3
Server, PDF and message cost	approx. Rs 3-6
Optional LLM text cost	approx. Rs 1-3
Gross margin	about 85-90%

Example month: 3,000 orders x average Rs 130 = Rs 3.9 lakh revenue. Marketing about Rs 1.2 lakh, tech and ops about Rs 40k, astrologer review about Rs 30k. Rough profit Rs 2 lakh+ (assumptions only).

Other revenue: puja/pandit booking commissions, affiliate sales (silver kada, yantras, books), B2B tie-ups with maternity hospitals, IVF clinics and baby photographers, annual forecast subscription.

9. Marketing and growth

- **SEO:** pages like "Revati nakshatra baby boy names" and "Meena rashi names starting with D".
- **Social:** Instagram Reels and YouTube Shorts ("Your baby's Rashi in 30 seconds").
- **WhatsApp:** shareable card ("Our baby's Rashi is Meena!") and referral codes (Rs 20 off for both).
- **Partnerships:** hospitals, gynecologists, baby shops, photo studios.
- **Seasonal offers:** Navratri, Dhanteras, Pitru Paksha reminders.
- **Trust:** named astrologer with face and bio, sample report, reviews, refund promise.

10. Trust, legal and compliance

- Disclaimer on every report: for guidance and cultural purposes, not medical or legal advice.
- Positive tone only. No fear-based selling of remedies.
- Privacy: follow India's DPDP Act (consent, secure storage, deletion on request). A child's birth data is sensitive.
- Refund policy: free preview before paying; refund if the PDF fails.
- Terms, Privacy and Refund pages; GST registration as turnover grows.

11. Team

Role	Responsibility
Founder / Product	Pricing, vision, partnerships
Astrologer (50 yrs)	Rule-book, QA of interpretations, brand face
Backend dev	Astro engine, rule engine, APIs
Frontend dev	Hindi-first mobile UI
Designer	PDF templates, branding
Marketer	SEO, social, partnerships
Support	WhatsApp support

12. Roadmap

Phase	Time	Goal
0: Validate	Weeks 1-2	20-30 manual reports; test Rs 51/101 with friends and family

Phase	Time	Goal
1: MVP	Weeks 3-8	Form, engine, Rs 101 PDF, Razorpay
2: Launch	Weeks 9-12	WhatsApp delivery, SEO, hospital partnerships
3: Scale	Months 4-6	Upsells, Kundali Milan, app, Marathi/Gujarati/Tamil
4: Expand	Months 6-12	Yearly subscriptions, B2B, printed books

13. Risks and mitigation

Risk	Mitigation
Wrong calculations	Swiss Ephemeris plus test suite against known charts
Wrong birth time	Time-accuracy flag and disclaimer
Competitors (AstroTalk etc.)	Niche focus on newborns, cultural personalization, very low price
Low trust	Named astrologer, sample reports, refund promise
Data privacy	Encryption, consent, deletion option
LLM errors	LLM writes text only, never calculates

14. KPIs

Visitor-to-preview conversion, preview-to-paid conversion (target 8-15%), average order value, cost per order, refund rate, repeat/upsell rate, WhatsApp share and referral rate.

Part 2: Reference Data from the Sample PDF

Source file: **Janam_Patrika__Baby_Boy_Darak.pdf** (13 pages, bilingual Hindi + English). Use it as the exact reference for structure, sections and tone.

Sections found in the sample (build the report in this order)

Page	Section
1	Cover: names, birth details, Rashi, Nakshatra, name letter, Lagna, shloka
2	Birth details, Panchang at birth, Avakahada Chakra
3	Lagna chart, Chandra chart, planetary positions table, Jaimini Chara Karakas, key aspects
4	Divisional charts: Navamsa (D-9), Dashamsa (D-10), varga table (D-1, 2, 3, 7, 9, 10, 12), varga conclusions
5	House-by-house analysis (12 houses), planetary strength summary
6	Yogas (auspicious) and Dosha check (Gandmool, Manglik, Kaal Sarp, Vish, Kemadruma, Pitru, Sade Sati)
7	Vimshottari Dasha: mahadasha table, antardashas, dasha results
8	Life predictions: personality, education, career, wealth, health, family, marriage, foreign
9	Remedies, Sanskar calendar (Namkaran, Annaprashan, Mundan, Vidyarambh), lucky factors
10	Name-letter guidance and 10 suggested names with meanings and numerology
11	Numerology part 1: Mulank, Bhagyank, Kua, combinations, lucky dates and colours
12	Numerology part 2: Lo Shu grid, planes, missing numbers, Kua directions, personal years
13	Summary, astrologer's note, calculation notes, blessing

Test case for the astro engine (ground truth)

Field	Value
Date / time	27 Sep 2026, 8:00 PM IST (14:30 UTC), Sunday
Place	Kharghar, Navi Mumbai, Maharashtra
Coordinates	19.0473 N, 73.0718 E (sample also shows 19 02' 50" N, 73 04' 18" E)
Settings	Sidereal, Lahiri ayanamsa (about 24 deg 13'), whole-sign houses, mean Rahu/Ketu, Vimshottari (365.25-day year)
Lagna	Aries (Mesha) 09 deg 28', Ashwini pada 3
Sun	Virgo 10 deg 16', Hasta pada 1
Moon	Pisces 21 deg 49', Revati pada 2 (12th house)
Mars	Cancer 05 deg 11', Pushya pada 1 (debilitated, Neecha-Bhanga)
Mercury	Libra 01 deg 45', Chitra pada 3 (Vargottama)
Jupiter	Cancer 24 deg 28', Ashlesha pada 3 (exalted)
Venus	Libra 14 deg 17', Swati pada 3
Saturn	Pisces 17 deg 14', Revati pada 1 (retrograde)
Rahu / Ketu	Aquarius 03 deg 40' (Dhanishta pada 4) / Leo 03 deg 40' (Magha pada 2)
Panchang	Krishna Paksha Pratipada (till 08:58 PM), Dhruva yoga, Kaulava karana, Surya nakshatra Hasta
Dasha	Mercury Mahadasha, balance about 10y 5m 9d at birth; Mercury-Sun antardasha running
Numerology	Mulank 9, Bhagyank 1, Kua 1 (male, 2026)
Name letters	Do (first choice), De, Di, Du, Cha, Chi, Tha, Jha

Field	Value
Tolerance	Planet degrees may differ by a few arc-minutes between software; signs, nakshatras, houses and yogas must match exactly.

Tip: The sample's own Panchang values (tithi end time, nakshatra times) should be cross-checked, not blindly trusted. If the engine disagrees by more than a few arc-minutes on any planet, investigate before moving on, and tell the founder.

Part 3: Master Prompt for Claude Code

Paste this as the first message (or let Claude Code read this section). The sample PDF must be in the same folder.

You are my senior full-stack engineer, product manager and Vedic astrology domain expert in one. I am a non-technical founder, so explain choices in simple language, keep code clean, and tell me exactly what to run.

PROJECT

Build "Janam Patrika" - a mobile-first website for India where parents enter a newborn's birth details, see a FREE preview (Rashi, Nakshatra, Pada, name letters), then pay a small amount (Rs 51 / Rs 101 / Rs 251) via UPI and get a beautiful bilingual (Hindi + English) Janam Patrika PDF. The file Janam_Patrika__Baby_Boy_Darak.pdf (13 pages) in this folder is the exact reference for structure, sections and look. Study it carefully first and list the sections you found.

BUSINESS MODEL

- Free preview -> Rs 51 Mini (3-4 pages) -> Rs 101 Full (13 pages like sample) -> Rs 251 Premium (full + 10 names with numerology + Sanskar calendar)
- Later upsells: Namkaran muhurat, Kundali Milan, yearly forecast, printed copy
- Prices must be editable from an admin config, not hard-coded.

TARGET USER

Hindi-first parents and grandparents on cheap Android phones, paying by UPI. UI must be simple, fast (light pages), large text, warm saffron/maroon/gold theme with a spiritual but modern feel. Language toggle: Hindi / English.

FORM FIELDS

Child name (or "Baby Boy/Girl of"), gender, father name, mother name, gotra (optional), kuldevi (optional), date of birth, time of birth with AM/PM plus "I'm not sure about exact time" option, place of birth (autocomplete that returns latitude, longitude, timezone), report language, WhatsApp number, email, consent checkbox.

CRITICAL RULES

1. All astronomical calculations must be done by code using Swiss Ephemeris (pyswisseph), Lahiri ayanamsa, whole-sign houses, mean Rahu/Ketu, Vimshottari dasha. NEVER calculate or guess planet positions with an LLM.
2. Verify the engine: write automated tests using the Baby Boy Darak chart from the PDF (27 Sep 2026, 8:00 PM IST, Kharghar, 19.0473N 73.0718E). Expected: Lagna Aries, Moon in Pisces, Revati pada 2, Mercury mahadasha with about 10y 5m balance. Show me the test results.
3. A rule-based engine detects yogas/doshas (Hamsa, Malavya, Neecha-Bhanga, Saraswati, Gandmool, Manglik, Kaal Sarp, Sade Sati, etc.) from the chart.
4. Interpretation text comes from a JSON/markdown rule-book of templates in a warm, positive, non-fearful tone. Optional LLM polish only for wording. Never use fear to sell remedies.
5. Hindi must render perfectly in the website and PDF (Noto Sans Devanagari).
6. Every report carries a disclaimer: for guidance and cultural purposes.
7. Privacy: a child's data is sensitive. Collect minimum data, HTTPS only, consent, a delete-my-data option, no data selling.
8. Never put API keys in code. Use a .env file and give me a .env.example.

TECH STACK (use this unless you give a strong reason to change)

- Frontend: Next.js + Tailwind CSS (mobile-first, SEO-friendly)
- Backend: Python FastAPI with pyswisseph
- Database: PostgreSQL (Supabase)
- PDF: HTML templates -> PDF (WeasyPrint or Playwright) with Devanagari fonts
- Payments: Razorpay (start in TEST mode)
- Storage: Cloudflare R2 or Supabase storage for PDFs
- Delivery: download link + email first; WhatsApp API later

HOW WE WORK

- Build in phases. After each phase: summarize what was built, how to run it, how to test it, and wait for my "go ahead" before the next phase.
- Before coding Phase 1, show me the folder structure, database schema and your plan, and ask any questions you need (max 5).
- Keep code simple and commented. Prefer boring, reliable solutions.

- If something needs a paid license or account (for example Swiss Ephemeris licensing for commercial use), warn me clearly.
- Initialize Git and commit after every phase.

START NOW: (1) list the sections you found in the sample PDF, (2) show the folder structure, database schema and phase plan, (3) ask your questions.

Part 4: Phase Prompts

Send these **one at a time**, only after the previous phase is tested and committed to Git. Never skip the testing step.

Phase 1: Calculation engine (most important)

Phase 1: Build only the astro engine as a Python module plus a tiny API endpoint /calculate. Input: date, time, lat, long, timezone. Output: JSON with Lagna, all planet positions, Nakshatra/pada, Tithi, Yoga, Karana, Moon sign, Avakahada details, D-9 and D-10, Vimshottari dasa with antardashas. Write tests against the Baby Boy Darak sample and show me passing results. No UI yet.

Phase 2: Rule engine and content

Phase 2: Build the rule engine for yogas and doshas and the numerology module (Mulank, Bhagyank, Kua, Lo Shu grid, personal years, Chaldean name numbers). Create the interpretation rule-book as editable JSON files in Hindi and English, matching the sample's tone. Add the name-letter lists by nakshatra pada and rashi, and a names database (start with 200 names with meanings).

Phase 3: PDF generator

Phase 3: Build the PDF generator that reproduces the sample's 13-page layout (cover, panchang, charts, divisional charts, houses, yogas, dasa, life predictions, remedies, name letters, numerology, summary). Draw the North Indian kundali charts as SVG. Create 3 variants: Mini, Full, Premium. Test with the sample data and show me the output side by side with my PDF.

Phase 4: Website

Phase 4: Build the Next.js frontend: landing page with sample preview, the form with place autocomplete, free preview page (Rashi, Nakshatra, name letters), pricing page, language toggle, and a thank-you/download page. Mobile-first, Hindi-first, fast, saffron-maroon-gold theme.

Phase 5: Payments and delivery

Phase 5: Integrate Razorpay (test mode) with UPI. Flow: preview -> choose plan -> pay -> webhook verifies payment -> generate PDF -> email + download link. Handle failed payments, duplicate webhooks, and automatic refund flag if PDF generation fails. Add invoice generation.

Phase 6: Admin and growth

Phase 6: Add an admin dashboard (orders, revenue, edit prices, view/regenerate report, coupon codes, referral codes), SEO pages for "[Nakshatra] baby names" and "[Rashi] names starting with ...", a WhatsApp share card, and analytics.

Phase 7: Launch checklist

Phase 7: Give me a pre-launch checklist: security review, privacy policy, terms, refund policy, disclaimer pages, DPDP Act basics, Razorpay live-mode steps, deployment steps (Vercel + Render/Railway), backups and monitoring.

Optional extra prompts

Phase 0 (accuracy check):

Phase 0: Before building anything else, compute charts for 5 test births I will give you and compare against my reference values. List every difference in degrees, nakshatra, pada, lagna and dasa balance, and explain the cause.

Design prompt:

Design prompt: Propose the visual design system: colors (saffron, maroon, gold, cream), fonts (Noto Sans Devanagari + a clean Latin font), button and card styles, and the layout of each page for a 360px-wide Android phone.

Show a simple wireframe for each page before building.

Part 5: Vibe-Coding Tips, Licensing and Risks

- **Test the engine yourself.** Compare 5 charts against the PDF source, other astrology software and your astrologer. If calculations are wrong, nothing else matters.
- **The astrologer's rule-book is your moat.** Have the 50-year astrologer review every interpretation in the JSON files. Competitors can copy a site, not a vetted rule-book.
- **Swiss Ephemeris licensing:** it is dual-licensed (AGPL or a paid professional license from Astrodienst). A closed-source commercial product needs the paid license. Check this early.
- **Keep wording safe.** Always show the disclaimer. Avoid predictions about death, serious illness or fear.
- **Payments:** stay in Razorpay TEST mode until you have run 20-30 real reports for friends and family.
- **Never paste secret keys into chat or code.** Use a .env file and keep it out of Git (.gitignore).
- **If Claude gets stuck or breaks something,** say: "Stop. Explain what is wrong in simple words, then fix only that part."
- **Commit to Git after every phase** so you can always go back.
- **Birth time matters.** Lagna and D-9/D-10 can change with a few minutes of error; keep the "not sure" option and show a note in the report.

Part 6: Pre-Start Checklist

Item	Why	Done?
Project folder with this PDF and the sample Janam Patrika PDF	Claude Code needs both	☐
Claude Code installed; Git initialized	Version control	☐
Python 3.11+ and Node.js 20+ installed	Backend and frontend	☐
Razorpay account in TEST mode	Payments	☐
Supabase project (free tier)	Database and storage	☐
Place search: Google Places API key or OpenStreetMap Nominatim	Auto latitude/longitude	☐
Email sender (Resend, Brevo or SMTP)	Report delivery	☐
Astrologer available to review the rule-book	Quality and trust	☐
Decision on Swiss Ephemeris license	Legal safety	☐
5 test charts from other software	Accuracy verification	☐

How to start: open a terminal in the project folder, run Claude Code, and type: *"Read JanamPatrika_Project_Blueprint.pdf and the sample Janam_Patrika__Baby_Boy_Darak.pdf, then follow Part 3 (Master Prompt)."*
